

Future proofing your power supply

NOTIFICATION OF UPCOMING WORK

Eastern section from
Arko Place to Kapiti
Airport. Western
section from Kapiti
Airport to Golf Road.

HOW

Most of the work will be done using a drilling approach known as horizontal directional drilling that drills under the footpath and installs a plastic conduit (pipe) that the new cable is then installed within.

TRAFFIC MANAGEMENT

Traffic management will be in place, requiring lane diversions or lane closures to provide space for worker safety.

A safer speed limit of 30 km/h will be in place around work sites.

Pedestrian access will also have restrictions around the works sites and diversions to cross to the other side of Kapiti Road will in place.

POTENTIAL SITE ACCESS IMPACTS

Cycle lanes will also be impacted and require cyclists to use traffic lanes during this time.

Access to residential properties and businesses should have minimal impact using this drilling technique.

However, because of the range of inground utility services in some locations, an open trench may need to be dug and temporary bridges for vehicle access will be put in place.

Additionally parking may be restricted during the time work is completed.

SITE HAZARDS

Access barriers around works sites will be set up. There may be uneven ground as a result of the work, however, Electra and its team will work hard to minimise or negate this.

Unfortunately, the drilling units do make noise during operation so expect an increased noise level around work sites.

Please stay well back from work sites and follow directions of workers, and keep pets away or on a leash when near the work sites.

Please be aware the ground around works sites may be uneven and take care to avoid potential trip hazards.

**Electra
apologies for any
inconvenience
and thanks you for
your patience and
support during the
completion of this
work.**

Electra

If you have a question or wish
to provide feedback, please
call Electra on 0800 353 2872

WHAT

Electra, your local electricity distribution company, is installing an underground high-voltage cable along Kapiti Road.

WHY

This investment will upgrade the electricity supply into Paraparaumu Beach.

It will deliver increased capacity to support forecast growth in energy usage from increasing residential housing density, commercial development and uptake in EVs.

WHEN

Work will start on
25 August
and continue through
until
5 December

Work will be
done from
**Monday to
Friday** between
7am and 6pm

WILL MY POWER GO OFF

This work does not require Electra to turn off power to your property. If this changes, we will notify you directly.

WHERE

The new cable will run from Arko Place, along Kapiti Road and terminate at the start of Golf Road.

Work will be done by teams working from both ends with the cable being laid under the footpath on the south side of Kapiti Road.
